Today, it would be easy for adversaries to introduce and detonate a nuclear explosive clandestinely in the United States. In or near a city, such an explosion would kill a great many people. Any nuclear explosion by an adversary against the United States would have repercussions that could profoundly impact the nation politically, economically, and even culturally in a variety of ways. Events would be set in motion that could affect world history, perhaps in catastrophic ways. It is a central thesis of this report that a clandestine nuclear attack and the defense against it should be treated as an emerging aspect of strategic warfare. U.S. DEFENSE PLAN AGAINST NUCLEAR ATTACKS provides information relating to: .DoD s main operational roles and missions: Discussion and recommendations .Clandestine attack scenarios vs. protection architectures . Imperfect defenses and improvements to intelligence capabilities .Operational changes and increased radiation detection performance .Plans for achieving the needed capabilities and effective implementation Includes a handbook intended to supply information for use in making a preliminary assessment of a situation in which possible chemical, biological or radiological materials is suspected along with a comprehensive glossary of terms and list of additional reference materials. THE DEFENSE SCIENCE BOARD TASK FORCE was established in March 2002 as part of the ongoing Defense Science Board s examination the Department of Defense s capabilities to deal with the issues of strategic terrorism and WMD proliferation. The Chemical/Biological/Radiological Incident Handbook was produced by the Chemical, Biological and Radiological (CBRN) Subcommittee of the Interagency Intelligence Committee on Terrorism (IICT).
